Swedish Modules to attend Data Centre World in London 12–13 March 2019

Global interest in modular constructed data centres is on the rise. While enclosed and containerised Prefab MDCS have cornered the greater share of the market so far, recent market analysis and reports indicate that prefab building structures are rapidly gaining traction. Swedish Modules is pursuing a strategy to become a major player in the data centre industry for modular constructed solutions and is delighted to be one of the exhibitors at Data Centre World in London this March.

"It's really satisfying to see that demand for modular constructed buildings is growing in the data centre industry, and that our history as a Swedish producer with a global footprint really pays attention to new customers and new markets. I've been working for over 20 years in this industry with turnkey delivered data centres, but I have to admit I'm surprised by the interest we've already generated through our solutions. As a result, we're really happy to be heading to London to let people know how Swedish Modules can make a difference in the market." says Pär Åberg, Chief Sales Officer at Swedish Modules

Don't miss the chance to meet us at Data Centre World! We'll be exhibiting at stand D39, EXCEL, London.
