

14 December 2020

Swedish Modules are certified according to ISO 9001:2015 and 14001:2015

Swedish modules have been certified according to ISO 9001: 2015 and 14001: 2015. This means that the company is certified according to international standards for certification of environment and quality management systems, used in companies and other organizations.

During 2020, Swedish Modules has undergone a certification process to become certified in accordance with the quality and environmental management system. The certification proves that Swedish Modules fulfills these international requirements and creates proven maturity for Swedish Modules as a company. It also promotes continuous improvement of routines and processes within the organization.

- We always aim to exceed our customers' expectations and needs. The goal of our environmental and quality work is to constantly develop and deliver the best products in the most resource-efficient way. This certificate shows that we have good processes in place, and it also opens up a new international customer base, says Sven Lans, Site and Quality Manager at Swedish Modules.

- During the year, we evaluated our processes and worked together in a systematic way to achieve this goal. We now have an acknowledgement that we have order and good routines in place in our business, and that we follow recognized environmental requirements, says Anders Wahlin who is System Manager at Swedish Modules and has run the internal project.

The certification is issued by Qvalify, who has carried out an independent, third-party audit of the management system within the company.
